

Substance Painter - ShotGrid

- Publishing

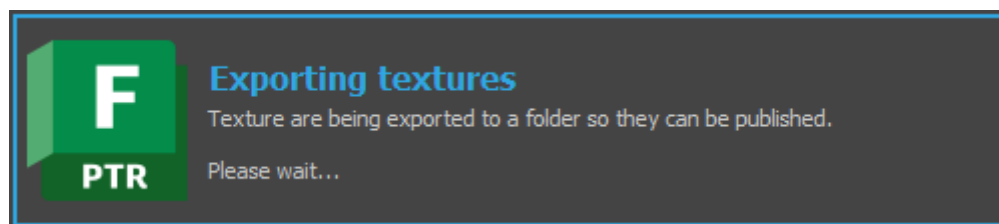

Publishing in Substance Painter is very similar to publishing in our other tools, you'll just have to make sure your export settings are configured correctly before publishing.

Open the *Export textures* menu (ctrl + shift + e). Make sure the output template is set to *Document channels + Normal + AO (With Alpha)* and make sure the *file type* is set to *exr*. You don't have to configure the *output directory*, as that's handled automatically. You can now click *Save settings*.

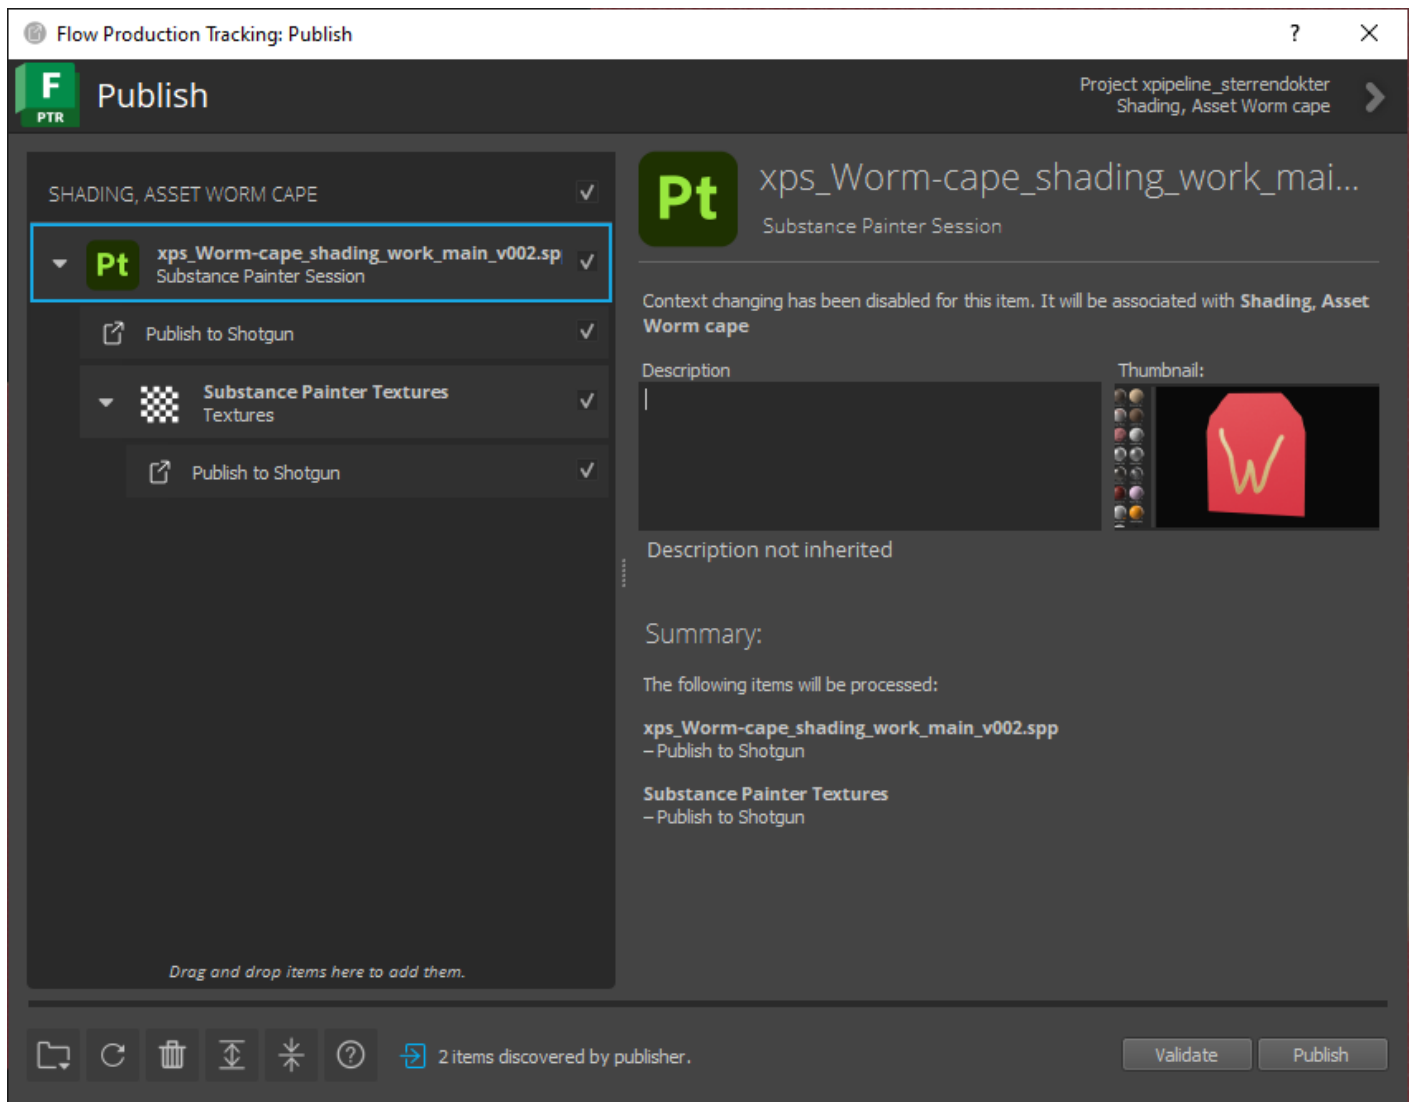

Output directory	C:/Users/Mervin.vanBrakel/Documents/Adobe/Adobe Substance 3D Painter/export R	
Output template	Document channels + Normal + AO (With Alpha) ▼	
File type	exr ▼	16f bits ▼
Size	Based on each Texture Set's size ▼	
Padding	Dilation infinite ▼	16 ▼

If you're using UDIMs you should make sure the output template you've picked separates the UDIMs with a dot, which looks like this in your output map: `(.$udim)`

Now we can publish our textures. Open the ShotGrid menu and press *Publish...* This causes a pop up to appear:

After a couple seconds the publish menu will open. Take a nice screenshot and press publish!
