ShotGrid - Website - Creating scenes and shots

Created projects show up on nfa.shotgunstudio.com. Clicking on a project takes you to that project's main page. From there you can click on *Shots* to go to the shots page.

Creating a new shot can be done by clicking the blue *Add Shot* button. A new form will appear which you can fill in. This is the form where you can create a new scene as well if it doesn't yet exist:

You should fill in the *Shot Name, Sequence*, *Task Template* and *FPS* fields. The template option is extra important, as it decides which tasks are added to the shots. Select *2D shot* if the shot only needs comp work and select *3D shot* if the shot also needs CG. The rest you can leave blank as it's filled in automatically when you ingest footage through Hiero. You can now click *Create Shot*!
